HEALTHCARE SOLUTIONS

TRANSPONET
ULTRA STATION

reddot award 2014 winner
AWARD-WINNING DESIGN MEETS HEALTHCARE NEEDS AND MATCHES THE HOSPITAL ENVIRONMENT
The Ultra Station features a next-generation design that offers healthcare facilities the simplicity of modern shapes combined with the latest technologies. The ergonomics, the acoustics, the illuminations, and the control panel of the station have been completely redesigned to make use of the pneumatic tube system intuitive for personnel in hospitals, while raising safety and hygiene levels.

**BENEFITS**

**Simplify cleaning and disinfection**
The smooth shapes without edges and corners enhance easy cleaning of the surface and therefore reduce the number of potential sources of cross infections.

**Reduce noise**
The Ultra Station casing design optimizes acoustics to reduce noise by 30% over competitive stations.

**Create a calm setting**
The integrated illumination design has been meticulously considered to provide a calm atmosphere, and to indicate station status.

**Improve productivity**
The perfectly adapted ergonomics at sending and receiving heights allow improved productivity over competitive station designs and reduce long-term work-related disability.

**Take advantage of modern technology**
Integrated touchscreen makes it easy to use the pneumatic tube system. Touchscreen technology speeds up routine programming tasks by approximately 20%; enabling faster access. Pre-programmed speed dials and directory permit efficient processing of transported goods.

The built-in security features limit access to authorized users and ensure optimal security for employees and patients.

The touchscreen can be operated with bare fingers or with gloves.

The help menu with informative features contains animations to allow the users to quickly obtain the required information for appropriate use of the Ultra Station.

**AT A GLANCE**

- Smooth shapes enhance easy cleaning and disinfection
- 30% quieter than typical free-standing stations, due to optimal acoustics
- Illumination and status lighting support calm setting and easy messaging
- Ergonomically adapted sending and receiving heights improve productivity
