TransLogic Pneumatic Tube System

Rapidly Transports Critical Medical Items

Swisslog's TransLogic Pneumatic Tube System (PTS) efficiently transports carriers at speeds up to 20 feet per second with payloads of up to 15 lbs with proven reliability. Typical applications include the movement of spontaneous and demand items such as lab specimens, blood products, medications, x-rays, and sensitive drugs. Carriers are transported through galvanized steel tubing through facility walls, ceilings and underground between buildings and arrive with soft delivery.

Hospitals Benefit from TransLogic Systems

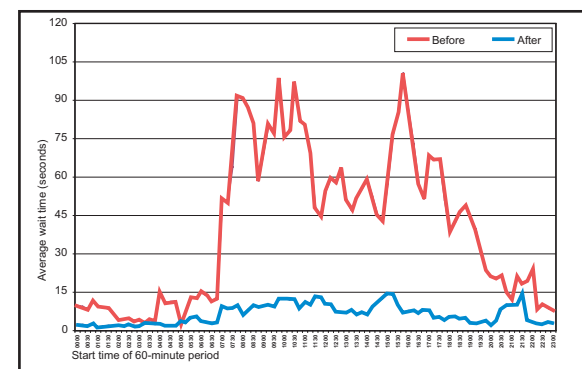

- **System Reliability** - reliability rates are the highest documented of any system manufacturer
- **Traffic Handling Capability** - Swisslog can analyze and simulate your system with unique programs - optimizing efficient performance
- **Easy to Use** - Our TL-series system control and operator station ensures uninterrupted performance
- **Innovation:** Radio Frequency Identification (RFID), Alert Messaging (paging), BioGuard anti-microbial protection in carriers, advanced system performance monitoring, speed control — just a few of our TransLogic innovations

TransLogic - The 1st and Premier Hospital Pneumatic Tube System

System Design Analysis Optimizes Pneumatic Tube System Performance

Our System Design Analysis (SDA) team utilizes custom analysis tools to illustrate inadequate materials transport system performance. Real-time simulations illustrate system activity including carrier speed, equipment positioning and transaction prioritization to provide optimal performance.

Software: Advanced Reporting, Monitoring, and Ease of Use

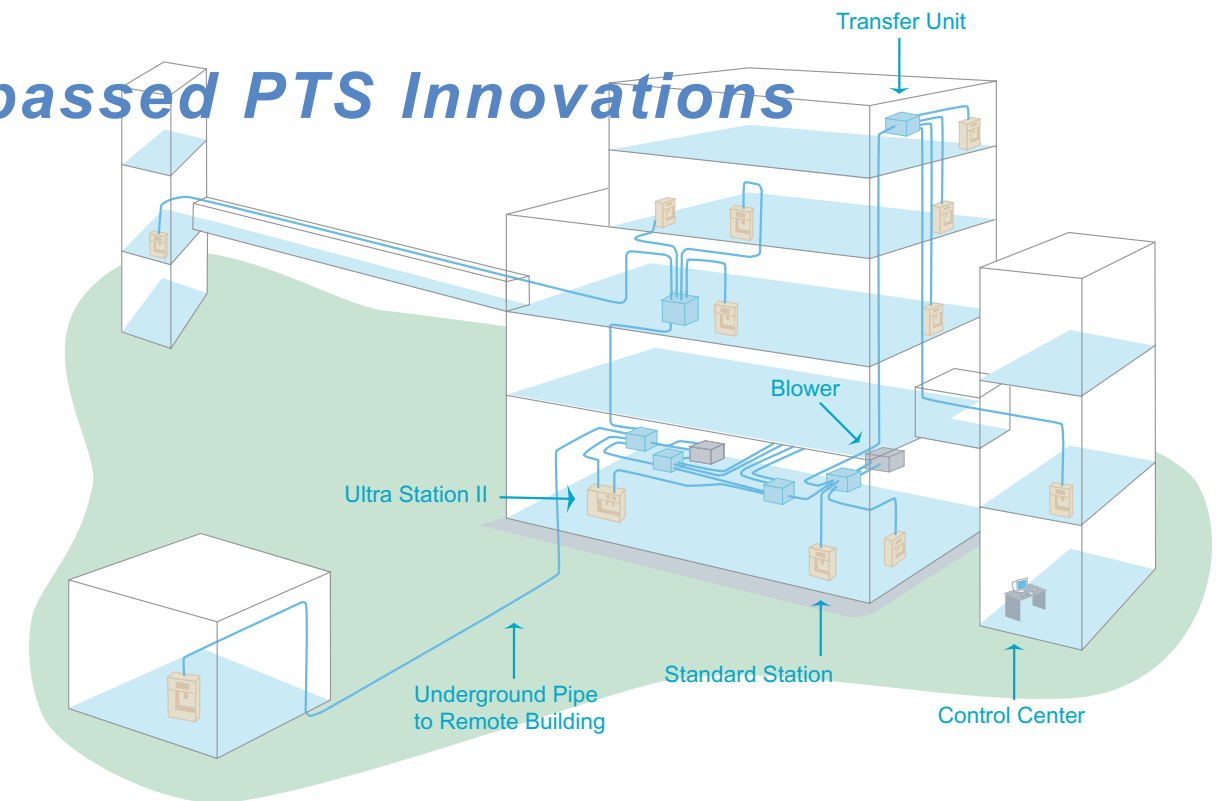

Swisslog's TL-series software provides superior flexibility, performance, and convenience in the management and maintenance of your pneumatic tube system.

The TL-series software allows networking with remote clients and establishes a solid foundation for future Translogic technology.

Due to ongoing improvement programs, Swisslog reserves the right of production or design change without notice or obligation.

Unsurpassed PTS Innovations

Versatile Stations

Stations are combined sending and receiving units with easy to use control panels.

Swisslog's versatile station portfolio includes a wide variety of stations and station options to meet each individual facility's requirement.

The versatile TransLogic Ultra Station II

PTS Carriers

Our TransLogic carrier portfolio includes:

- Leak-resistant carriers
- RFID-capable carriers
- Anti-microbial carriers
- Department/function-specific color carriers

On the Move in Healthcare

A Global Presence

Over 2,000 customers around the world have a Swisslog system operating within their facility. Swisslog's offerings include consulting, system design, installation, implementation and a life-time customer support partnership.
