

## HEALTHCARE SOLUTIONS

### AT-A-GLANCE

### LOGISTICS AUTOMATION SOLUTIONS FOR HEALTHCARE FACILITIES

### Swisslog Healthcare Solutions: By the Numbers

- > 500 employees in North America
- > Over 100 service technicians throughout North America
- > Systems installed at over 2,000 hospitals in North America, including 19 of the 21 rated by *U.S. News & World Report* as America's best hospitals
- > Average time period until a Swisslog system pays for itself is 1½ years

### Save Time, Save Money, Save Lives

Hospital CEOs, CFOs and board members throughout North America are partnering with Swisslog for solutions to some of their most difficult problems. We improve the operational efficiency, financial performance, and patient safety of healthcare facilities using our products.

### Logistics Automation

Swisslog designs logistics automation solutions that meet the storage, movement and distribution needs of healthcare facilities. Our product portfolio includes systems that greatly reduce or eliminate the manual transport of materials and systems that automate medication management within hospitals.

The benefits to our customers are both financial and operational. The financial benefits include an excellent return-on-investment, reduced inventory, far fewer costly medication errors, and lower operating costs. The operational benefits include faster turn-around times, reduced processing errors, and greater safety for patients and staff.

## Core Competency

Swisslog has installed materials transport and medication management systems in more than 2,000 hospitals throughout North America.

We offer total systems design, manufacturing, installation and customer support giving you a complete supply chain management approach to the logistics challenges of your hospital.

## Product Offerings

### Automated Materials Transport Systems (AMTS)

These systems provide both on-demand and scheduled transport of materials within a hospital, where sterility and security must be taken into account. For example, controlled medications can be whisked by our pneumatic tube system from the pharmacy to a nurses' station. Or, an operating room nurse can use the same tube system to send blood products from the O.R. to the laboratory for immediate analysis. We also provide automated guided vehicle systems for scheduled transport of heavy payloads, such as food, linens or waste. And our autonomous mobile robots are used within large laboratories for on-demand transport of anything weighing up to 50 pounds.

### Automated Drug Management Systems (ADMS)

Our ADMS solutions offer a comprehensive approach to medication management. If you want to reduce or eliminate costly medication errors while improving the speed and efficiency of your drug supply chain, Swisslog provides the solution. We also help pharmacy directors maintain tighter control of their inventory with a high-density automated warehouse for the storage and dispensing of medications, refrigerated medications, and supplies. This solution is faster and more secure than standard vertical carousels. And our MedRover mobile dispensing cabinet reduces the medication retrieval and delivery burden of nurses.

## Swisslog – *Simply Better*

- > Outstanding Product Performance
- > Superior Product Reliability
- > Visionary Product Innovation
- > Excellent Customer Service and Support
- > Speedy Return-on-Investment
