6-inch Universal Carrier

The 6-inch Universal Carrier is used to transport a wide variety of vital materials.

When used in conjunction with an additional containment procedure, the Universal Carrier provides a secure environment to send fragile items or other specialized materials. These clear polycarbonate carriers have self-closing latches and side opening design to give the user full access to the carrier. The carriers are bi-directional so they can be loaded into the station in either orientation.

6-inch Universal Carrier

Ordering Information for the 6-inch Universal Carrier and Components

Description	Part Number
6-inch Universal Carrier with DuraBands™	Part #075-5081-01

*Swisslog will provide a new carrier if the carrier body breaks under normal use within five years of the date of purchase. Swisslog will at its discretion provide replacement Durabands or a new carrier if the Durabands fail (lose a sufficient number of fibers to impair the lift-off, smooth travel or soft delivery of the carrier) under normal use within five years of the date of purchase. This guarantee does not apply to latches or hinge pins.
