Swisslog Inventory Management Solutions

Perpetual Inventory

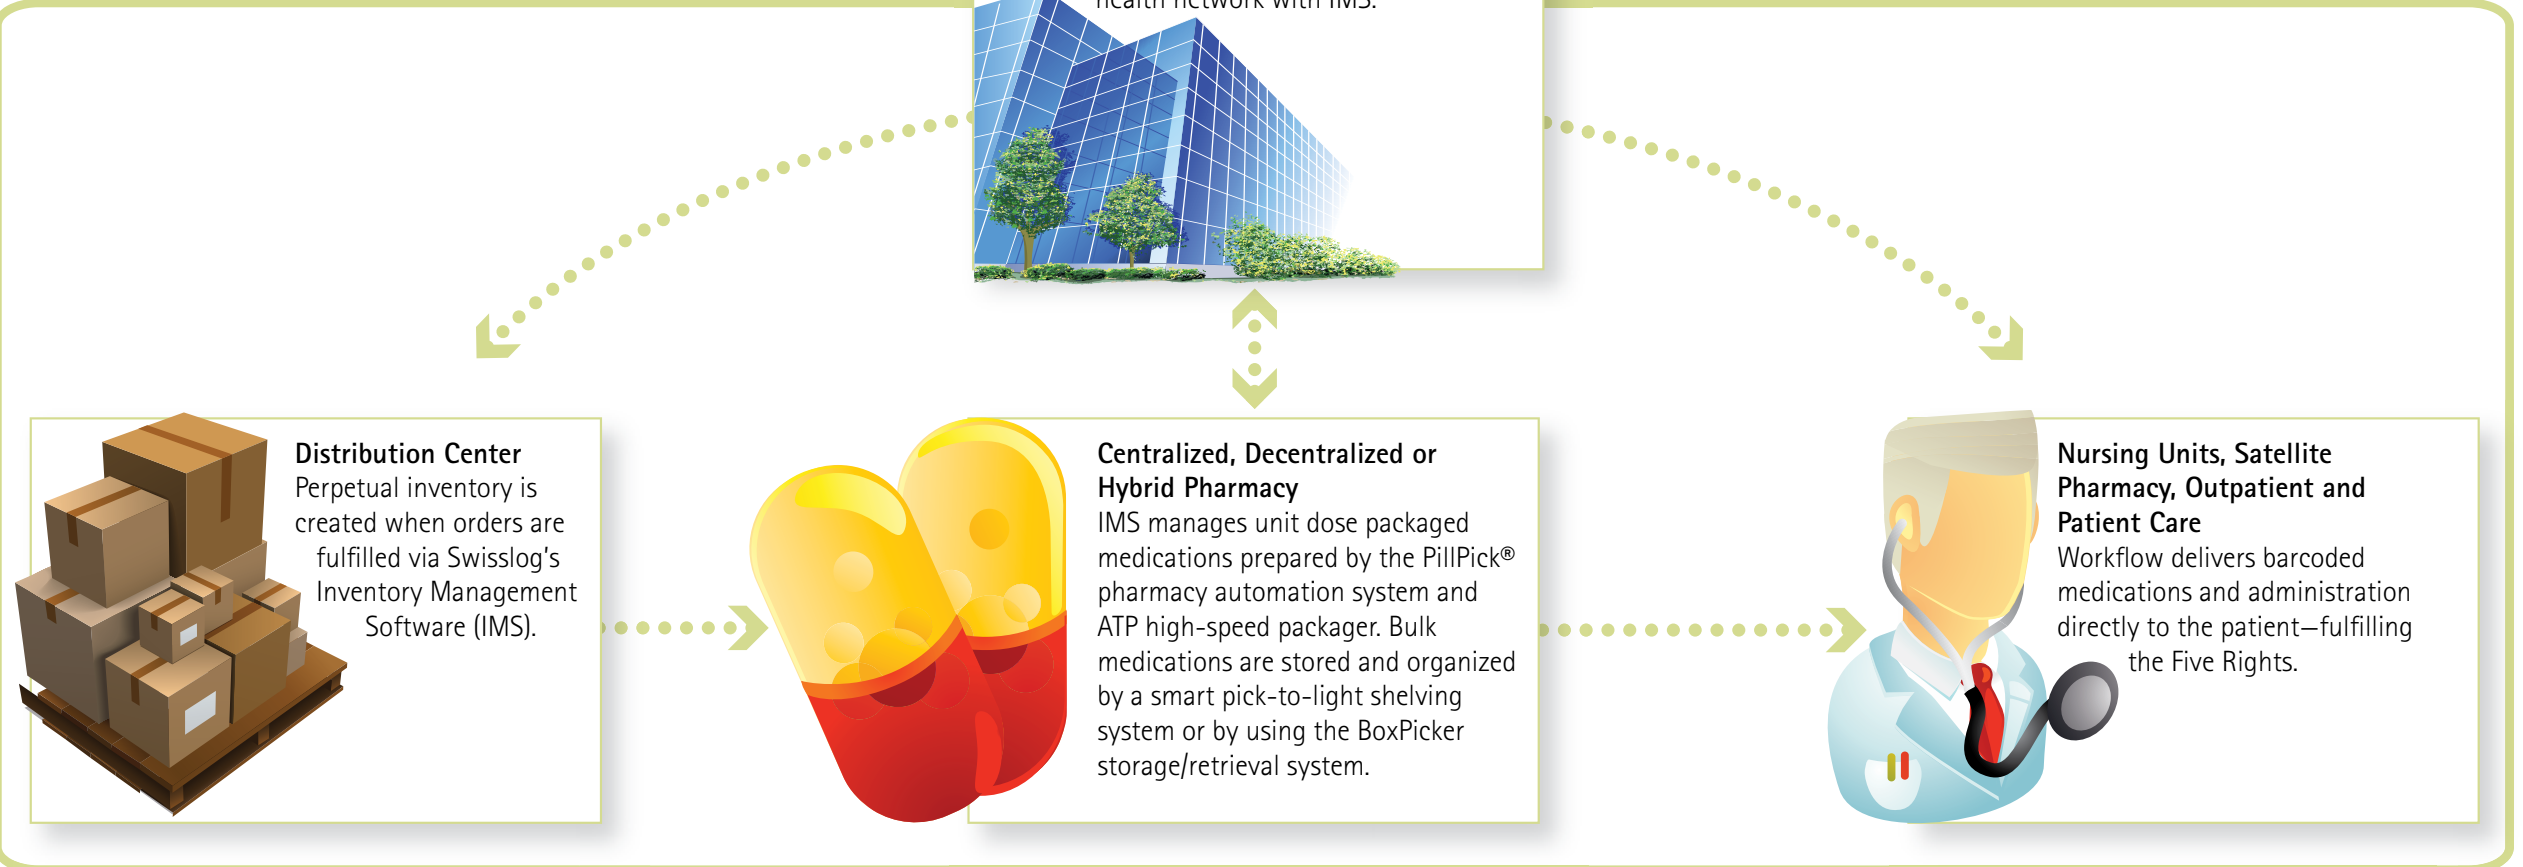

Hospital pharmacies must control inventory costs, improve workflow efficiencies and assure patient safety. Swisslog's Inventory Management Solutions provide your pharmacy with control over inventory and working capital, while implementing proven technologies that enhance patient safety.

Inventory Management Software

Swisslog's Inventory Management Software (IMS) optimizes pharmacy inventory and provides a "perpetual inventory" approach specifically designed for hospital medication flow. Swisslog's IMS will automate reordering of drugs directly with the hospital's pharmaceutical wholesaler. All inventory movements from the warehouse to dispensing; stock levels, remote inventory, and replenishment are recorded and tracked.

IMS features several modules including inventory ordering/receiving, satellite pharmacies/departments, central pharmacy, and reporting. IMS provides full reporting capability linked to the HIS. Hardware includes a mobile workstation and a wireless handheld scanner.

INVENTORY MANAGEMENT SOFTWARE

Why Inventory Management?

- > **Workflow Efficiency**
Supply chain control from the dock to the patient—optimizing staff time and synchronizing tasks.
- > **Track and Trace**
Improve utilization and safety with precise tracking using inventory scan in/out technology and reporting to trace movements and costs.
- > **340B Drug Pricing**
Automatically split 340B and non-340B orders. Track 340B medication quantities and costs, while maintaining virtual inventory that creates vendor replenishment orders meeting 340B industry standards.
- > **Cost Data Management**
View, print and export cost data—identifying trends and cost snapshots of various storage locations.
- > **Perpetual Inventory**
Cut costs by increasing inventory turns and decreasing missing and expired medications.
