

HEALTHCARE SOLUTIONS

OPTIMIZE DRUG MANAGEMENT OPERATIONS

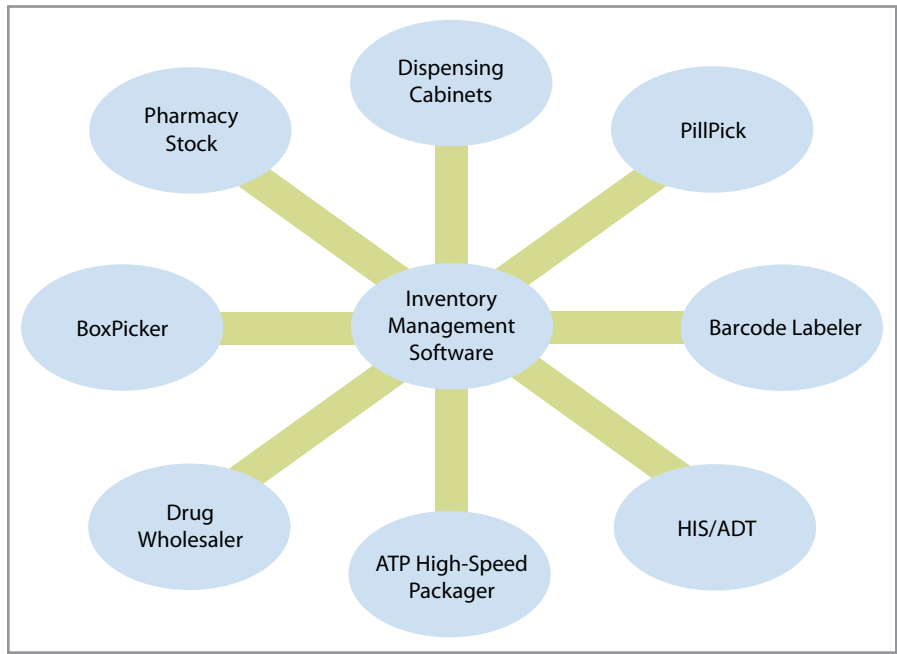

Swisslog's pharmacy automation solutions streamline and optimize hospital pharmacy operations with the powerful combination of inventory management software, high-speed packaging and secure storage and retrieval.

Pharmacy directors now have the technology to easily, safely and securely manage drugs, while increasing operational efficiency, reducing costs and increasing patient safety.

Packaging Made Simple with ATP

Swisslog's ATP high-speed packaging and barcoding solutions are not only fast and efficient, they provide many levels of patient safety. Color coded fill-to-light trays, locking canisters, and accurate labeling with barcode capabilities enable pharmacies of any size hospital to ensure patient safety. Many additional accessories and interfacing capabilities complement the ATP packagers and provide gains in workflow efficiency. ATP packagers provide flexible dispensing options, such as packaging direct to patient-specific orders, cabinet replenishment and storage in BoxPicker.

Optimize Inventory with IMS

Swisslog's Inventory Management Software (IMS) optimizes pharmacy inventory and provides a "perpetual inventory" model specifically designed for hospital medication management. IMS automates reordering of drugs directly with the hospital's pharmaceutical wholesaler. All inventory movements from the warehouse to dispensing are recorded and tracked.

IMS features inventory ordering/receiving, satellite pharmacies/ departments, central pharmacy, and reporting. IMS provides full reporting linked to the Hospital Information Systems. IMS can serve as a stand-alone application to track shelf stock or integrate directly with automated equipment, such as ATP high-speed packagers and BoxPicker.

Why Buy a Carousel When There's BoxPicker?

Swisslog's BoxPicker, also known as the "uncarousel," provides high-density storage and dispensing of medications and supplies. Unlike carousels, BoxPicker allows access to only a single drug at a time, while maintaining a faster picking rate. In addition, this system provides integrated refrigeration for storage of most drug products in one place. BoxPicker provides USP 797 compliance by combining storage and pass-through capability to an ante room using operator stations on opposite sides. This enables access to compounding products from inside and outside of the ante room.

BoxPicker vs. Carousels

	BoxPicker	Carousels
Single Drawer Access	x	
Automated Picking	x	
Scan In / Scan Out	x	x
Space Saving	x	x
Scalable	x	
Bulk Item Storage	x	x
Dual Temperature	x	
USP 797 Compliant	x
