SWISSLOG HEALTHCARE

Automating Your Pharmacy is as Simple as 1-2-3

What if you could optimize your hospital pharmacy inventory, securely automate your medication storage and retrieval, and increase the speed and accuracy of your unit-dose packaging?

With Swisslog, by combining the power of three integrated solutions designed to work together, you can streamline your pharmacy operations while improving medication safety, security, and efficiency within the entire healthcare organization.

1

Pharmacy Manager

Key Advantages:

- Connects the supply chain to patient delivery by controlling the movement of medication across the enterprise
- Leverages system-wide usage data to optimize inventory levels and control drug spend
- Integrates directly with automated equipment such as ATP and BoxPicker

2

BoxPicker™
Automated Pharmacy Storage System

Key Advantages:

- Secure, high-density storage of bulk, injectable, oral, liquid and solid medications
- Supports USP <797> compliance with anteroom configurability
- Fully automated system increases workflow efficiencies and saves time

ATP®-Series
Automated Tablet Packaging System

Key Advantages:

- High-speed delivery of unit-dose oral solids packaged for patient-specific orders and cabinet replenishments
- Interfaces with multiple devices
- Onsite canister calibration

3

Optimize Your Inventory **1**	Securely Automate Your Medication Storage and Retrieval **2**	Make Unit-Dose Packaging Faster and Safer **3**

Pharmacy Manager - Visual inspections and handwritten notes can lead to costly overstock, stock-outs and buying emergencies – preventable problems that could negatively impact staff productivity and the patient experience. Pharmacy Manager provides end-to-end integration from the wholesaler to the patient, allowing hospitals to accurately manage drug and supply inventory, track expired and recalled medications, manage drug shortages, automatically replenish stock, and confirm dispense orders, all from an easy-to-use dashboard interface.

BoxPicker™ Automated Pharmacy Storage System - BoxPicker fully automates medication storage and retrieval, which not only eliminates picking errors and increases safety at dispense, but also creates a more efficient pharmacy workflow- allowing the pharmacy staff to focus on revenue generating tasks and spend less time locating, picking and verifying medications. With BoxPicker, hospital pharmacies can virtually eliminate picking errors, increase safety at dispense and improve hourly productivity and picking performance through multi-user, multi-tasking automated storage and retrieval.

ATP®-Series – Automated Tablet Packaging System - A vast majority of US-based hospitals are sending more than 95% of their medications in bar coded unit-dose form.[†] Packaging and dispensing medication by hand can introduce errors that may be passed on to patients. The ATP-Series is a high-speed system that accurately labels and delivers patient-specific and unit-dose packages in a variety of sizes to meet the needs of medication cart fills, dispensing cabinet replenishments and STAT orders. The ATP System minimizes human touches and maximizes productivity within any medication distribution model.
