

I AM ON MY WAY TO THIS ADDRESS (AND I AM HERE RIGHT NOW)
I NEED TO BE THERE AS SOON AS POSSIBLE
MY LOAD FACTOR IS 83%

I AM CARRYING DANGEROUS GOODS

MY DRIVER IS

- SOBER
- BELTED
- EDUCATED IN ECO-DRIVING
- KEEPING SPEED LIMITS
- ACTING IN COMPLIANCE WITH REGULATIONS

MY CO₂ FOOTPRINT IS BELOW 780 g/km

MY VEHICLE HAS THE HIGHEST SAFETY CLASS

I HAVE BEEN VERY NICE TO OTHERS

WELCOME!

I CAN SEE THAT YOU ARE ONE OF THE GOOD GUYS.

YOU WILL GET ACCESS TO THE BUS LANES.

ALSO, I CAN GUIDE YOU TO YOUR DESTINATION
AND OUT AGAIN IF YOU WANT

THANKS!
YOU ARE THE BEST!

BYE! THANKS FOR THE HELP. I SAVED 66 MINUTES!
AND MY CO_2 FOOTPRINT DURING MY VISIT WAS ONLY 5291g.
MY PREVIOUS RECORD WAS 7218g.

BYE!
WELCOME BACK!

Automatic for the people

How Germany's Otto uses artificial intelligence

The firm is using an algorithm designed for the CERN laboratory

Print edition | Business >

Apr 12th 2017 | HAMBURG

A GLIMPSE into the future of retailing is available in a smallish office in Hamburg. From there, Otto, a German e-commerce merchant, is using artificial intelligence (AI) to improve its activities. The firm is already deploying the technology to make decisions at a scale, speed and accuracy that surpass the capabilities of its human employees.

Big data and "machine learning" have been used in retailing for years, notably by Amazon, an e-commerce giant. The idea is to collect and analyse quantities of information to understand consumer tastes, recommend products to people and personalise websites for customers.

Otto's work stands out because it is already using machine learning to make decisions that its human employees could not. The firm's algorithm is designed to predict the best time to deliver a product, to recommend products to customers and to predict the likelihood of returns of products, which cost the firm millions of euros a year.

The Problem

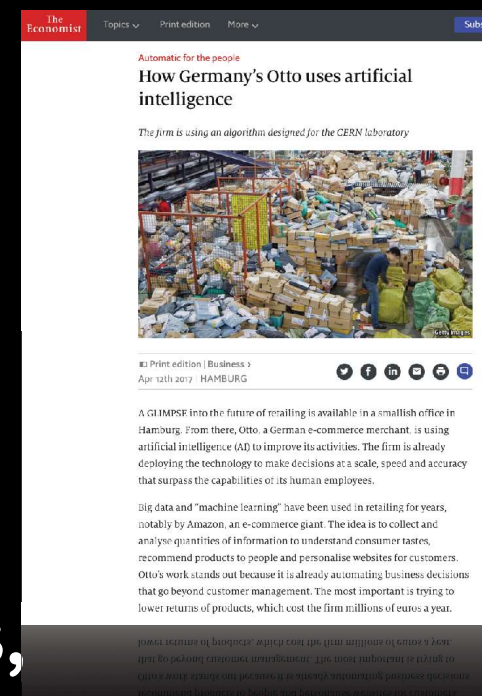

- Returns are expensive
- Customers less likely to return product if delivery lead time is short
- Long delivery lead times due to dropshipping
- Customers want one shipment
- Leads to unwanted inventory

The Economist, April 12, 2017
<http://www.economist.com/news/business/21720675-firm-using-algorithm-designed-cern-laboratory-how-germanys-otto-uses>

The Solution

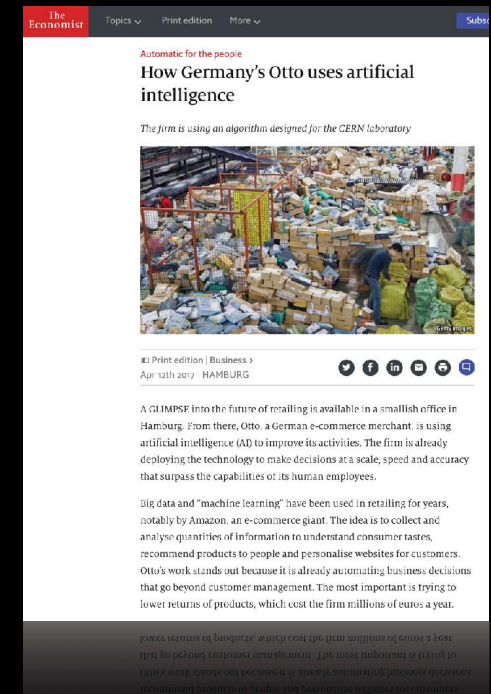

- Enable short lead times without increasing inventory
- At the same time, avoid multiple shipments to the same customer
- Try to predict future customer orders and pre-order from supplier
- Too much data for human analysis, however

The Economist, April 12, 2017
<http://www.economist.com/news/business/21720675-firm-using-algorithm-designed-cern-laboratory-how-germanys-otto-uses>

The Solution (cont.)

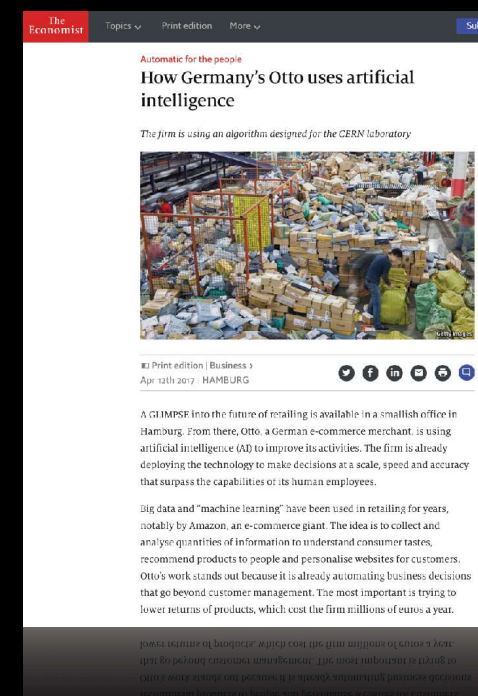

- Use an AI to analyse 3 bn transactions and 200 variables (past sales, searches on site, weather etc.)
- The AI foresees future customer orders and makes procurement decisions based on these projections

The Economist, April 12, 2017
<http://www.economist.com/news/business/21720675-firm-using-algorithm-designed-cern-laboratory-how-germanys-otto-uses>

The Results

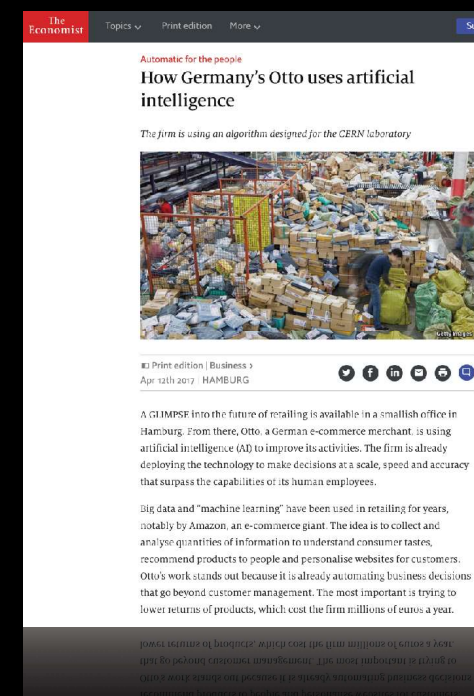

- The AI predicts with 90% accuracy what will be sold within 30 days
 - The AI procures around 200 000 items per month
 - Returns are diminished by 2 million items per year
 - Stock level has been reduced by 20%
- More personnel were hired (!)

The Economist, April 12, 2017
<http://www.economist.com/news/business/21720675-firm-using-algorithm-designed-cern-laboratory-how-germanys-otto-uses>

Takeaways

- AI used to make **existing processes** better
- AI is **not only** for Amazon and Google
- This development **has just started...**

The Economist, April 12, 2017
<http://www.economist.com/news/business/21720675-firm-using-algorithm-designed-cern-laboratory-how-germanys-otto-uses>

Example:
You are looking to buy a new sweater from a store.

The sweater has a unique QR code attached.

You scan the code with your mobile.

?

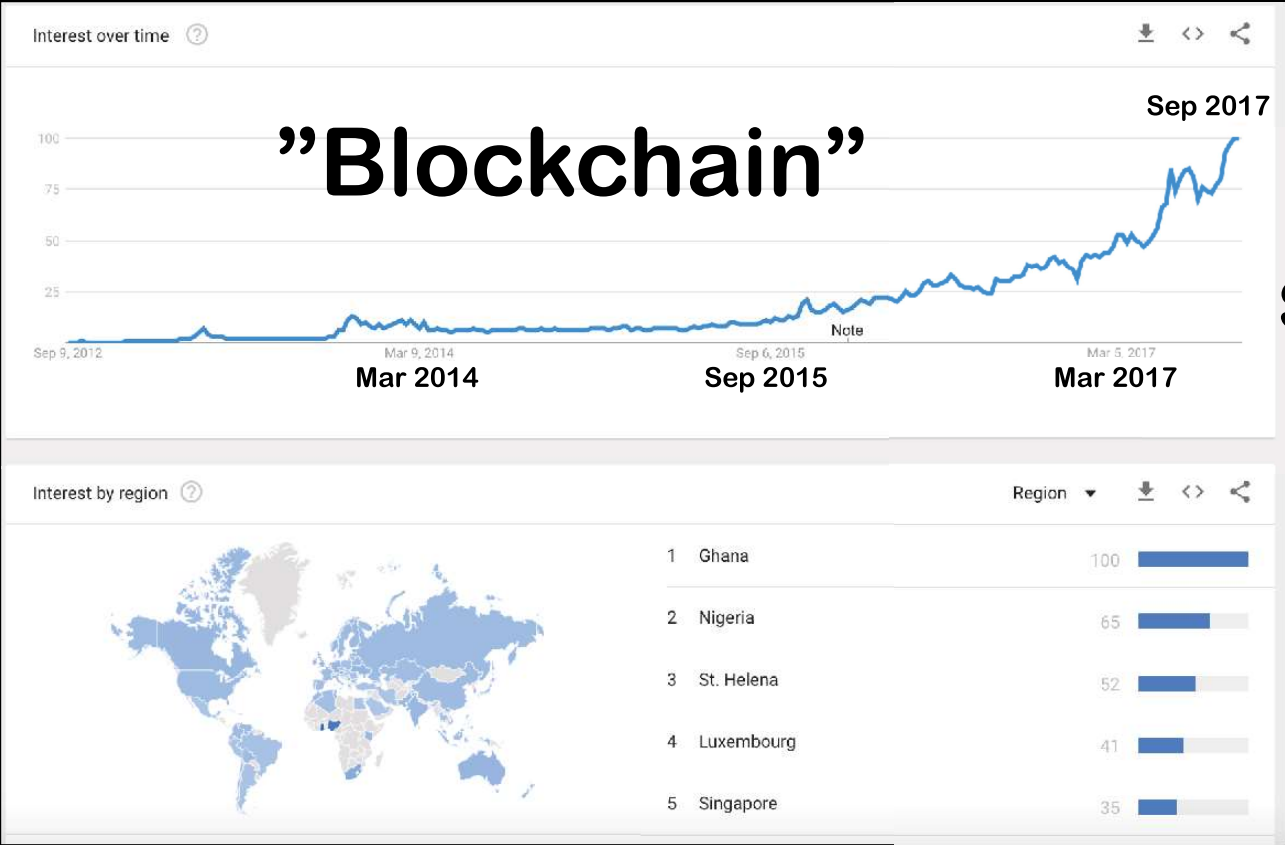

Asks about this sweater

[illegible]

Just 2 years!

Blockchain technology

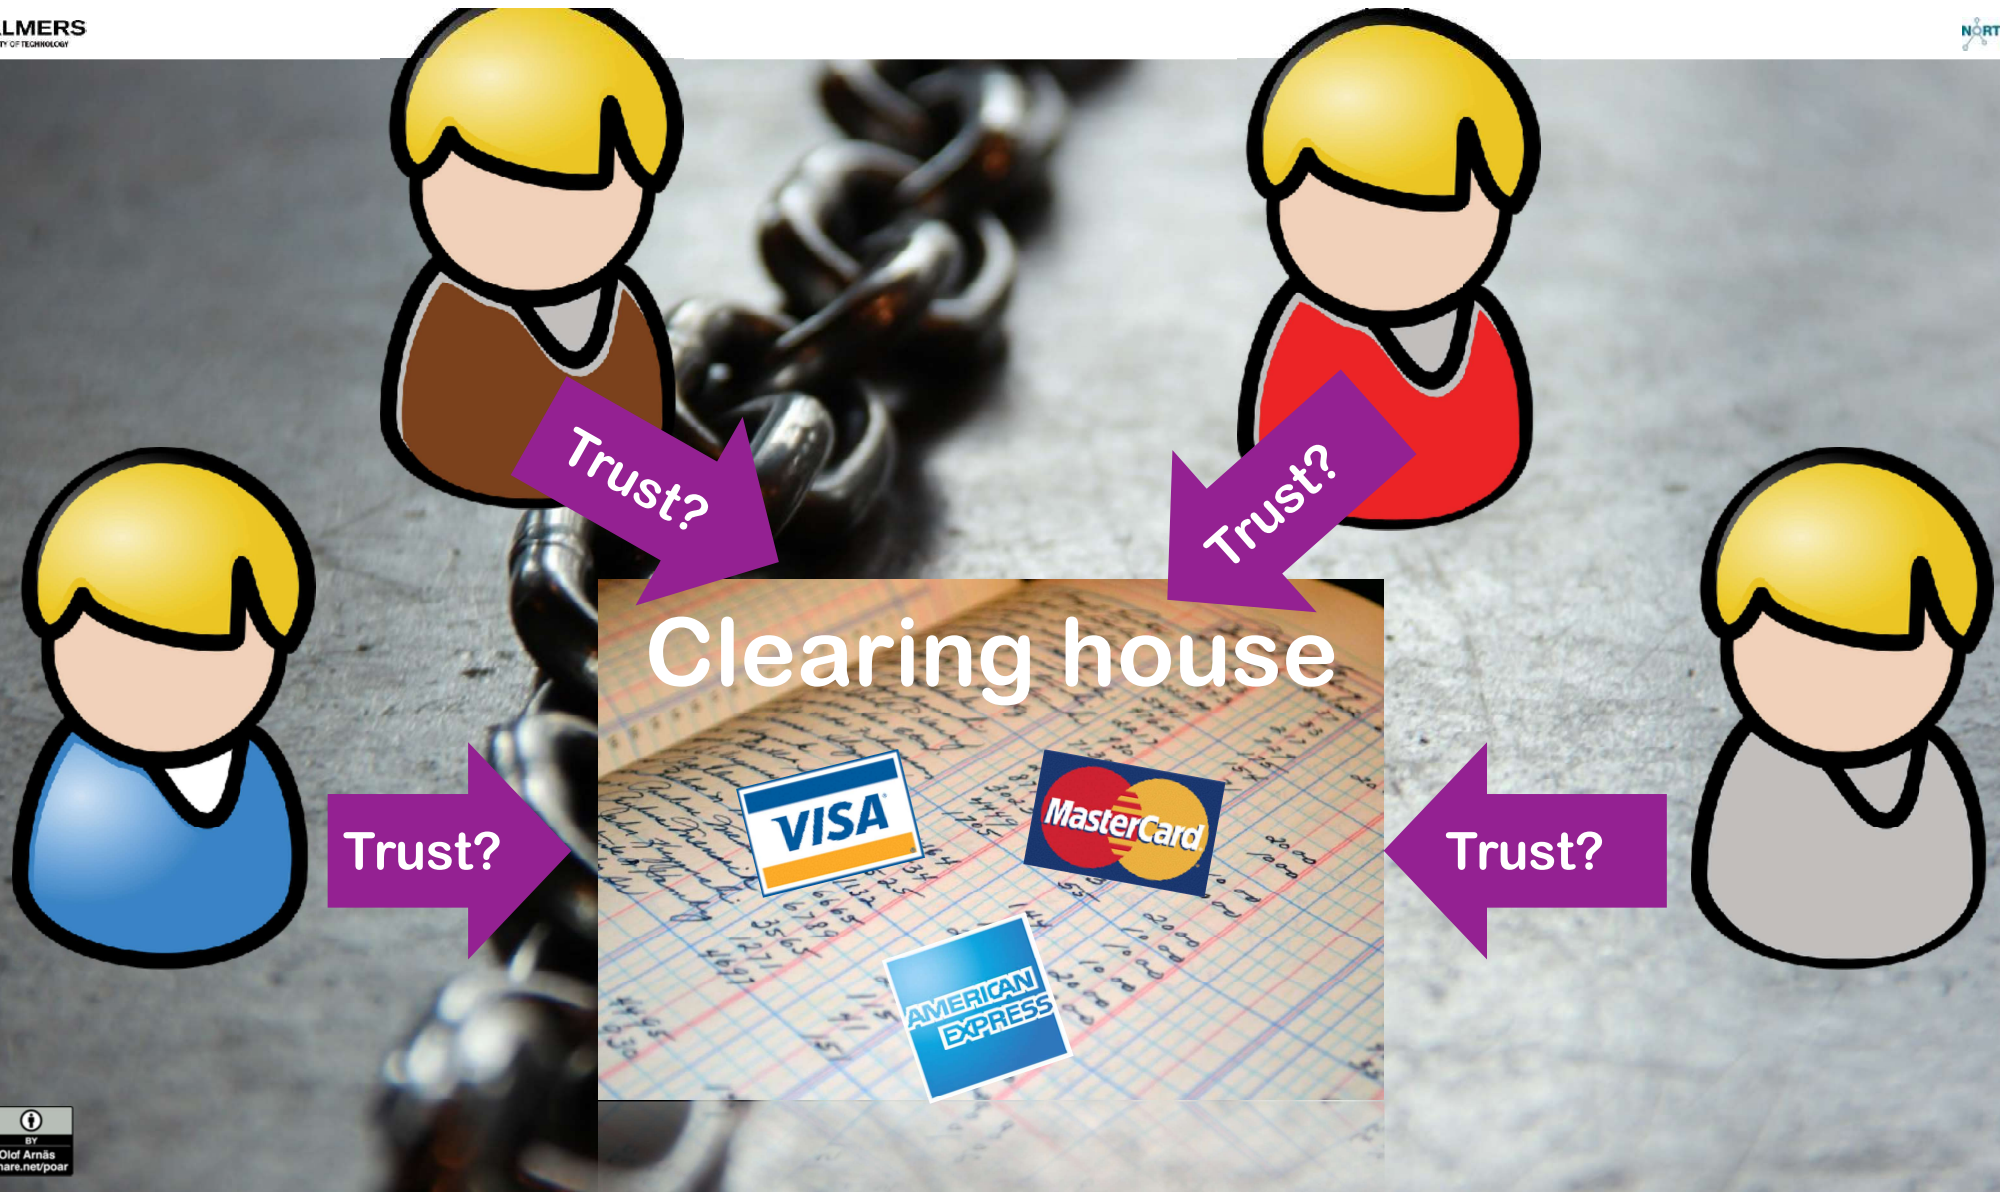

Records transactions and
data among actors that
do not trust each other

Fully
decentralized

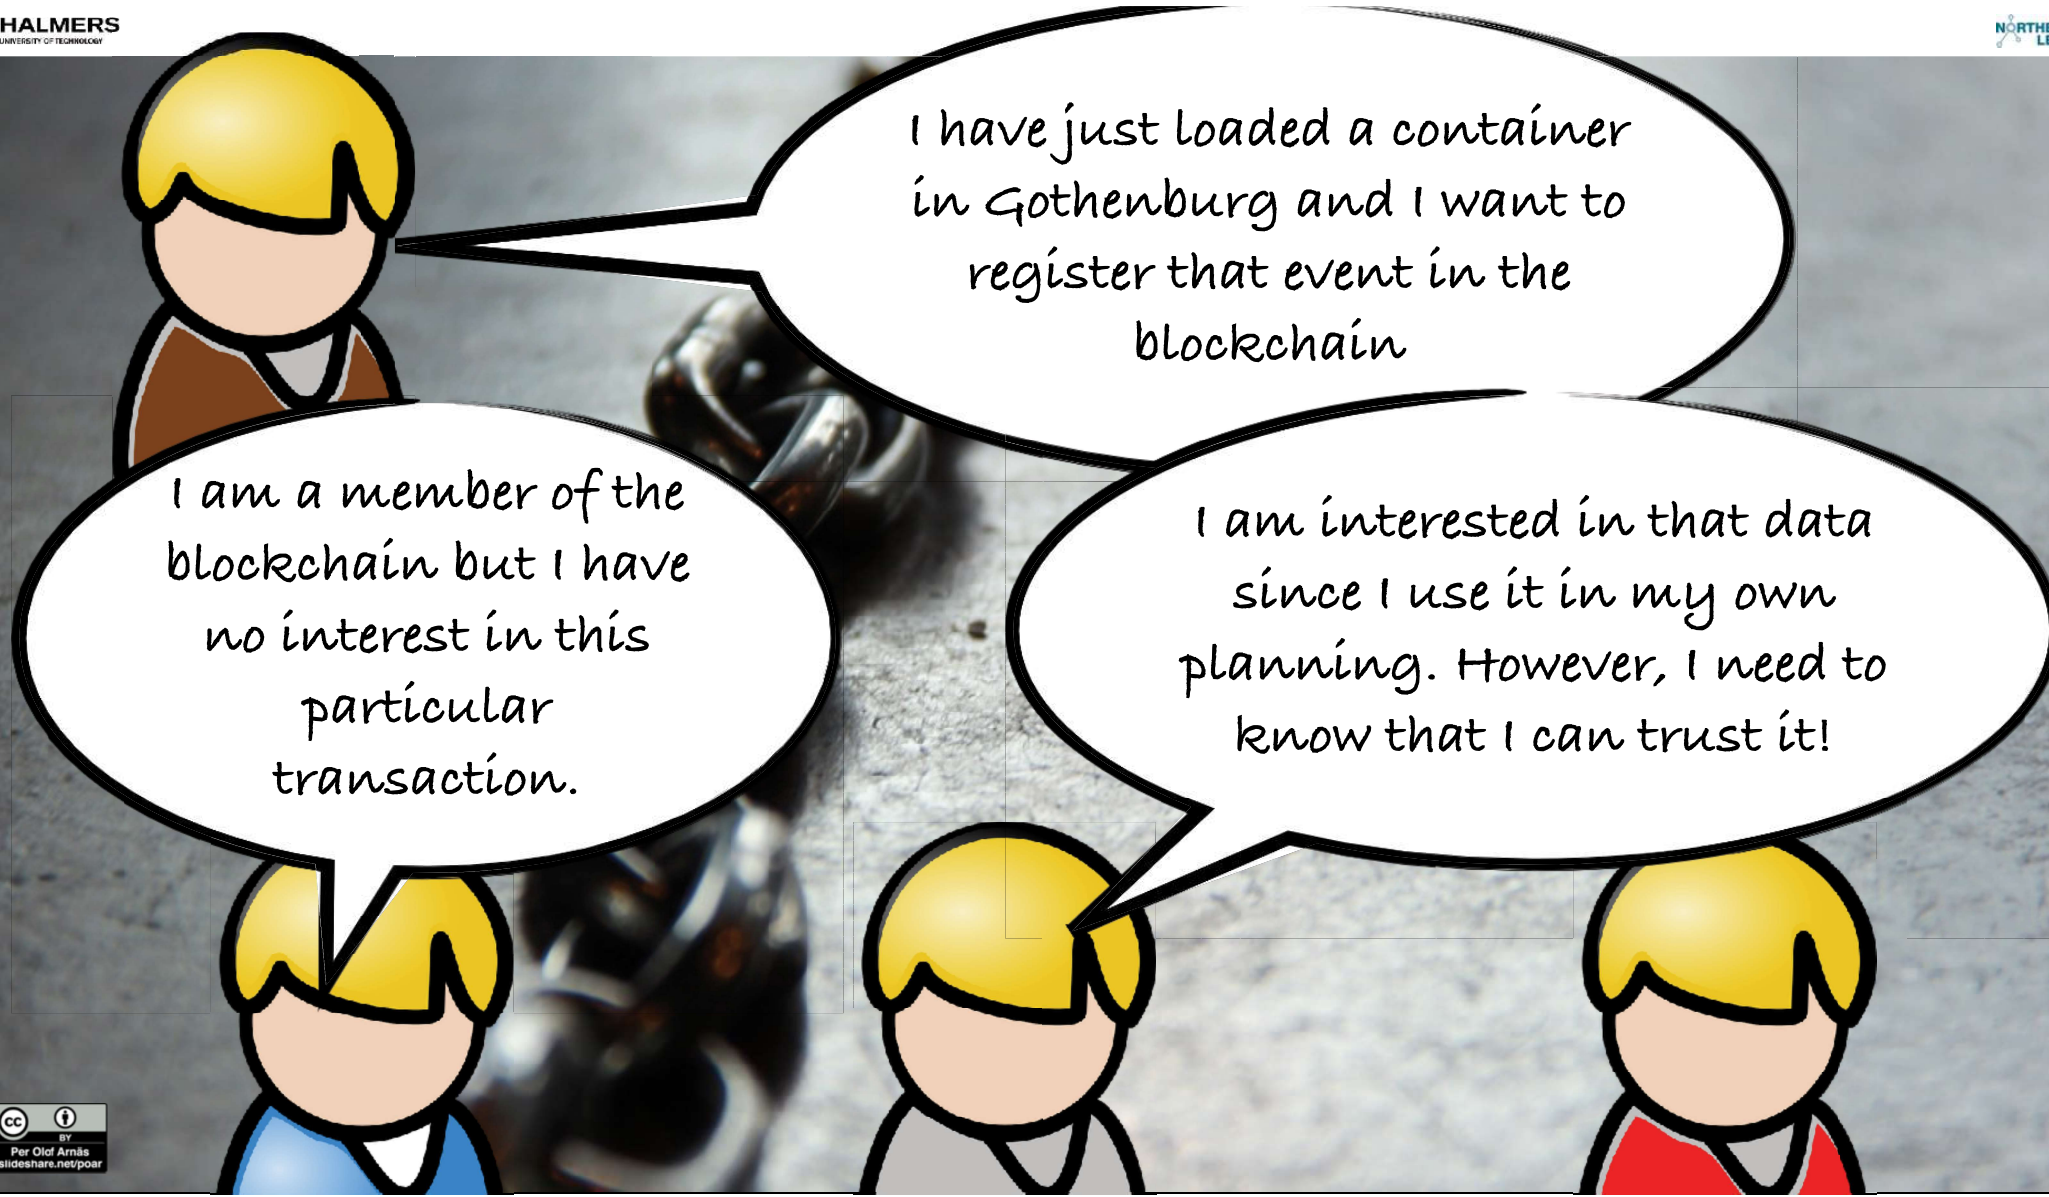

Actors that **do not trust** each other
= your typical supply chain

I have just loaded a container
in Gothenburg and I want to
register that event in the
blockchain

I am a member of the
blockchain but I have
no interest in this
particular
transaction.

I am interested in that data
since I use it in my own
planning. However, I need to
know that I can trust it!

I want to add the following data to
the block chain:

C1234-LOADED-GOT-171004

The new checksum is:

2E-5F-63-78-A9-87

I want to add the following data to
the block chain:

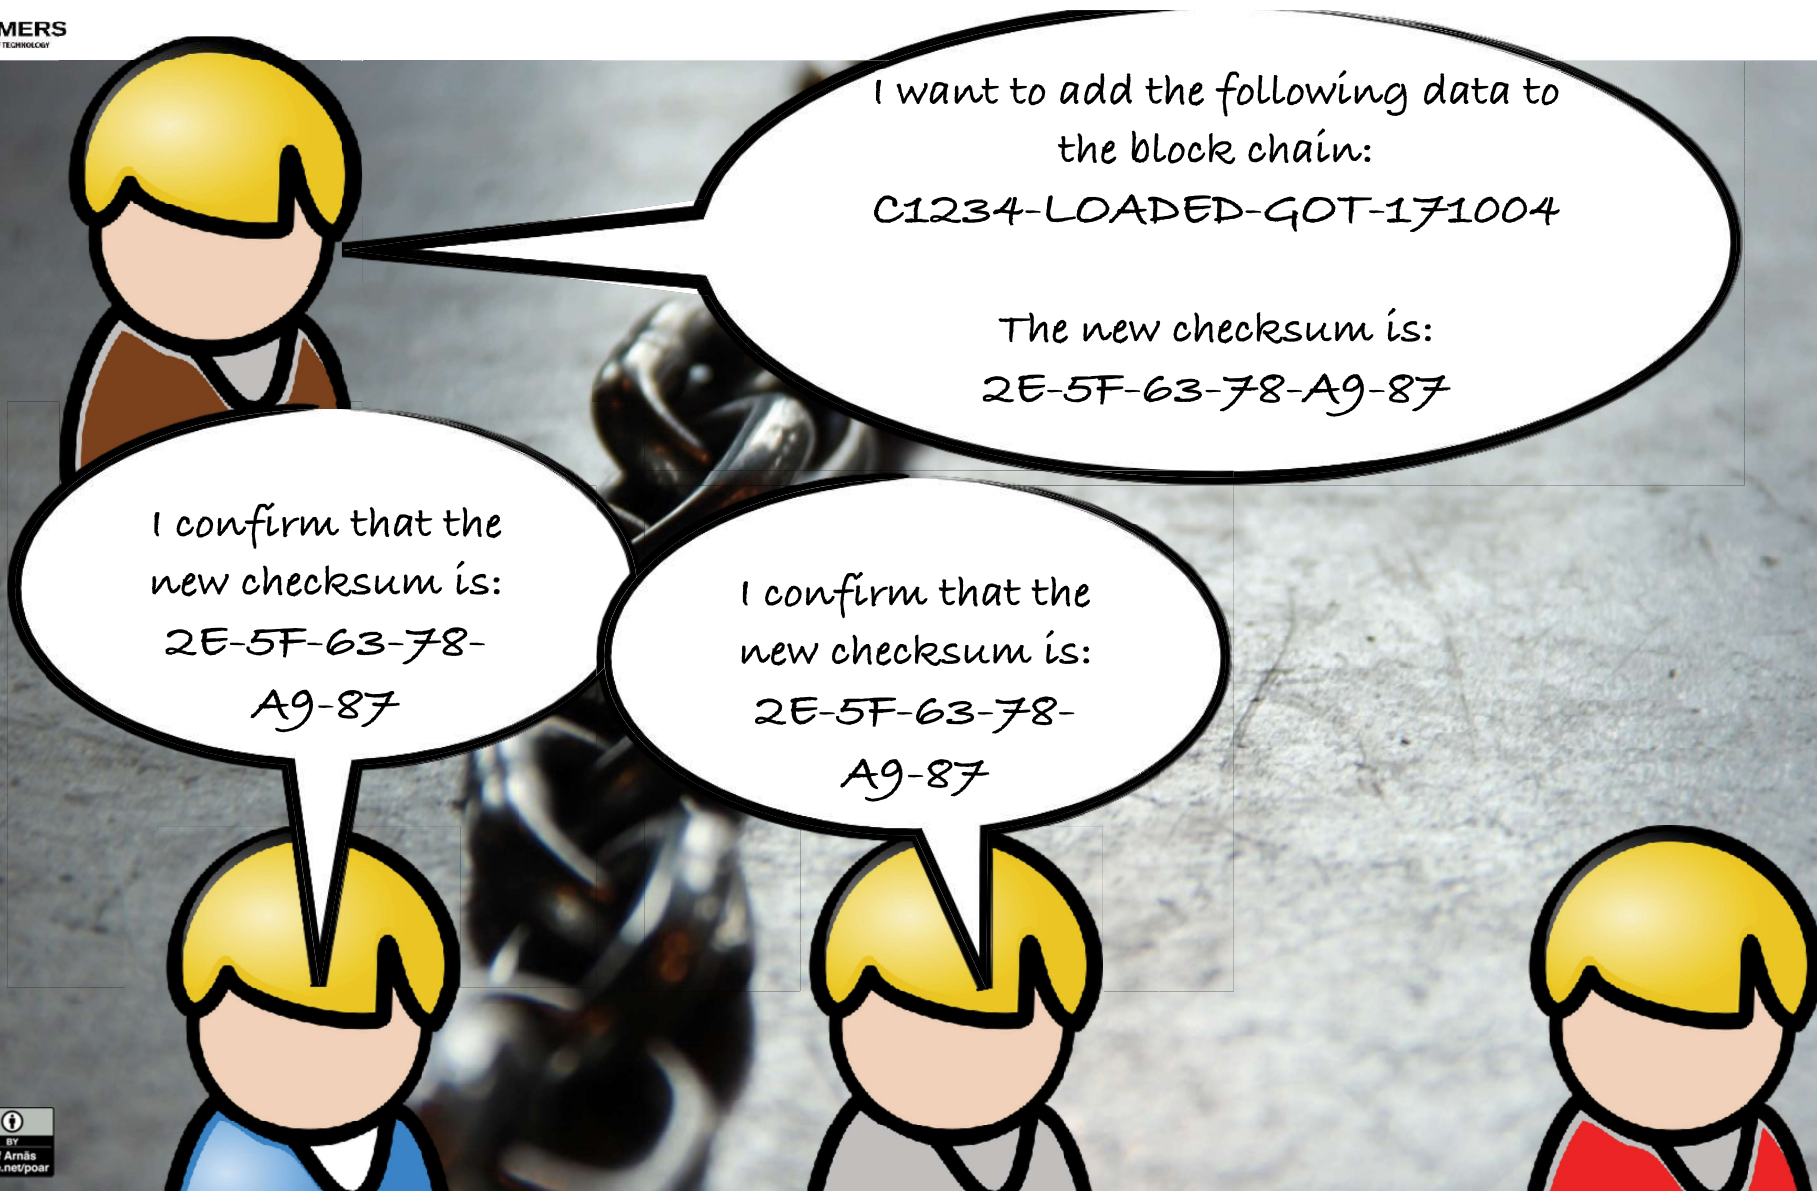

C1234-LOADED-GOT-171004

The new checksum is:

2E-5F-63-78-A9-87

I confirm that the
new checksum is:

2E-5F-63-78-
A9-87

I want to add the following data to
the block chain:

C1234-LOADED-GOT-171004

The new checksum is:

2E-5F-63-78-A9-87

I confirm that the
new checksum is:

2E-5F-63-78-
A9-87

I confirm that the
new checksum is:

2E-5F-63-78-
A9-87

I want to add the following data to
the block chain:

C1234-LOADED-GOT-171004

The new checksum is:

2E-5F-63-78-A9-87

I confirm that the
new checksum is:

2E-5F-63-78-
A9-87

I confirm that the
new checksum is:

2E-5F-63-78-
A9-87

OK, since more than
50% of you confirm,
we can add the data
to the block chain
